

Examination Systems in Small States: Comparative Perspectives on Policies, Models and Operations (Educational Development in the Small States of the Commonwealth Series)

This publication is based on the content of a pan-Commonwealth workshop in Barbados in 1996. Participants looked at issues such as: personnel and infrastructure; international recognition and national priorities; innovative ways of testing; using technology to improve efficiency. Examination Systems in Small States deals with the provision of examinations in small states. It presents a conceptual framework and discusses models for the administration and provision of examinations at the end of the secondary cycle.
